Treatment

88Labware offers the treatment of used crucibles and products containing platinum or other precious metals thus giving its Customers the possibility to cash in on their precious material assets.

Safety

88Labware is a synonym of safety thanks to its decades-long experience, its skilled technicians and its latest generation machineries, which enable it to offer to its customers a precise analysis of the precious metal quantity contained in their products.

Transparency & traceability

Transparency and traceability are the basis of the treatment process of the precious products, guaranteed by TÜV along the whole production flow: from melting to analysis and to settlement of the precious metal contained.

Nothing is destroyed everything is transformed

“nothing is destroyed, everything is transformed” strengthened by this philosophy 88Labware gives to its customers the possibility to quantify the obtained precious metal contents and to decide whether to monetize it at its actual market prices or to use it for the production of new crucibles or other analysis accessories in platinum and its alloys.
